MANAGE YOUR HORTICULTURAL ASSETS WITH GrowData FMP

GrowData FMP is a cloud-based Farm Management Platform for tracking production, inventory & cost inputs, enabling farms to plan, monitor & analyze performance and meet compliance standards across your horticultural and viticultural enterprises. GrowData FMP transforms real-time datapoints and processes into actionable insights.

Spray Diary & App

Manage spray applications and Batch ID quickly and easily with associated tracking & reporting

Inventory Management

Live and accurate, minimizes risk, manages orders, stock-take and associated costs.

Fertigation & Irrigation

Track inputs & water volumes and associated costs down to a block level.

Compliance

Developed to meet domestic and international requirements.

Harvest Traceability App

Infield labour and bin management, know where your produce originated, production numbers, manage piece rates and associated details through your packhouse to final consignment.

Productivity Costs

Benchmarking labour rates and bin movements against production measures. Track at activity level, labour, machinery and input costs by crop, variety & block.

Packhouse

An integrated packing program to handle pre and post pack identification and tracking of produce requirements.

Reporting

An extensive reporting suite, with the ability to incorporate Microsoft's Power Bi tools for custom results.

Integration

A key attribute to a modern system, with the ability to incorporate GrowData data with other platforms to create a central data location.
